FOREWORD

It is with a great deal of pride that I, as President of NASIS, have the opportunity to prepare the foreword for this, the 1980-81 annual report on information systems in the states.

To the best of my knowledge, there is no other reference source which presents the comprehensive information contained in this document. Where possible NASIS has tried to portray the trends over time that are taking place.

Although no accurate accounting can be made, it is estimated that at least five man years of voluntary effort have gone into the preparation of this report. The usefulness of the report not only to state governments in the effective utilization of information systems resources, but also to educators, other levels of government and the private sector, has more than justified this effort.

As the reader makes use of this report I am sure he will join in saying thank you to the staff which assembled it and even more so to the membership which provide the data on which it is based.

Dozier Johnson
Tallahassee, Florida
January 1981

THE NATIONAL ASSOCIATION FOR STATE INFORMATION SYSTEMS—AN OVERVIEW

NASIS, the National Association for State Information Systems, is an organization having as its members the 50 states of the United States, its territories, and the District of Columbia. The Canadian provinces of British Columbia, Ontario, and Quebec participate as associate members, while a correspondent relationship is maintained with many other foreign nations. NASIS functions as a cooperating agency of the Council of State Governments and maintains close working relationships with the National Governors' Association, the National Conference of State Legislatures, the National Association of State Budget Officers, and many other state and local government-oriented organizations. NASIS' central purpose is assistance to state governments in providing effective service to their citizenry and the best possible use of their information systems resources.

That NASIS is involved in a difficult task is attested to in many ways. One is the problem inherent in attempting to apply this twentieth century technology within long-established organizational frameworks and operating environments. Another is the traditional problems encountered by those institutions, agencies, or individuals who act as agents of change. But the challenge is there, and the opportunity to improve government is unparalleled. NASIS intends to continue to aid its members in meeting the challenge and in making the most of the opportunity.

NASIS ORGANIZATION

NASIS is composed of four regions: eastern, midwestern, southern, and western. The regional organizations hold at least one regional meeting a year, featuring speakers and workshops. The NASIS annual meeting is held in August.

Each member state is invited to designate a prime contact in each of the executive, legislative, and judicial branches. Its bylaws provide that the vote of each state is shared equally among representatives of each of the three branches of any state. These individuals are responsible for providing the leadership for the NASIS program. From among this group is selected the 19-member Executive Committee, which consists of the two directors elected by each region, chairpersons of the five standing committees, and at least one representative each from the legislative and judicial branches, the president, past president, president-elect, and secretary-treasurer.

NASIS is funded by contributions from members, the amount determined by population groupings. NASIS has also been privileged to receive grants from federal sources, particularly the Community Services Administration and its predecessor, the Office of Economic Opportunity.

RESULTS OF NASIS

NASIS staff provides continual daily support to the states on an array of topics, as well as compiling this annual report, planning the annual meeting, and assisting in the regional meetings, when needed. The funds contributed by the states and received under a grant from the Community Services Administration have been generally used to support NASIS activities which are broadly applicable to all states. The results of this activity have largely accrued in eight areas.

State-Federal-Local Relations. NASIS views the continuing coordination with federal agencies, which are involved in state information systems, as one of the major roles of the organization. NASIS has served effectively and is continuing to serve as a focal point of communication to a broad spectrum of federal agencies. This relationship is reinforced further by the National Governors' Association and the National Conference of State Legislatures utilizing NASIS in their liaison with the many federal agencies which have an influence on state information systems.

In the NASIS relationships with federal agencies, efforts focused on the Community Services Administration, which provided it with funding; the Department of Justice; the Department of Labor, with regard to its policy statement on shared facilities; the General Accounting Office, which has an interest in the effect of federal policies on the states' operation of automated information systems; and with the Office of Management and Budget. The Department of Health, Education, and Welfare and the Department of Agriculture find NASIS a useful means of disseminating information about new programs available to state governments.

The 13-state test of a proposed federal aid reporting system in which NASIS participated was successfully concluded during the past year and on the basis of the findings of that test the Office of Management and Budget (OMB) determined to fully activate the system beginning with the quarter starting October 1, 1980. This report for the first time will give state policy and decisionmakers timely information as to where federal funds are flowing into the state and for what purpose. With financial support from the Community Services Administration NASIS representatives continue to assist OMB in the implementation and refinement of the system and help the states in maximizing the benefits of the information it contains. A second group of state representatives will be working with states as their analysis systems are developed to enhance the ability to transfer such programs between states.

NASIS continues to work with the National Bureau of Standards (NBS) in seeking ways in which they can best work with NBS as new standards are developed in the data processing field. It is hoped that in the future state and local governments may be able to act with rather than react to these efforts.

Security and Privacy. NASIS continues to assume a leadership role on behalf of the states in the serious and complicated questions relating to data privacy and security, and in legislation being proposed on this emotional issue. In the earlier years of the NASIS Standing Committee on Security, Privacy, and Confidentiality, a great deal of effort was expended in bringing this issue to the attention of the lawmakers and promoting the enactment of workable legislation. These efforts have been accomplished by working closely with the staffs of the National Governors' Association, the National Conference of State Legislatures, the National Association of State Budget Officers, and with those congressional committees and their staffs charged with privacy and security legislation.

NASIS has served as a member of the Congressional Office of Technology Assessment (OTA) advisory panel on National Information Systems. This study looked not only at the overall questions of legal, constitutional, and regulatory environment, but also the social, political, and economic impacts. In addition to these general questions, NASIS served on sub-groups to review electronic message switching and criminal justice systems. The outcome of this OTA study will have a direct impact on congressional actions regarding all methods of recordkeeping, including rights to privacy and the security safeguards required.

In addition to these efforts, the NASIS Standing Committee on Security, Privacy and Confidentiality has published two reports concerning this area. The first of these, *Guidelines for Development of Computer Crime Legislation* contained a sample bill which has been published in the Council of State Governments' *Suggested State Legislation,* Volume 40, 1981. The second report which was published by NASIS in July 1980 was *An Analysis of State Government Use of Hardware and Software for Protection of Computerized Data.*

Standards. The NASIS Standing Committee on Standards also published a report as a result of its analysis of billing methods and algorithms which satisfy federal requirements. The report was titled *Requirements of the Federal Department of Health, Education and Welfare for Cost Recovery of Data Processing Services to Federally Funding State Agencies.* The committee also circulated suggested clauses for state computer procurement clauses.

In addition to the work of the standing committee an ad hoc committee prepared a report of its finding on the status of telecommunications in the states and how this resource is managed. As a result of the findings of this group the subject has been made a part of the work program of the Committee on Research and Education.

Disaster Recovery Planning. Based on the findings of an ad hoc committee the importance of this subject to state information systems administrators was brought into sharp focus. In many states a prolonged shut down of certain computer installations could bring vital state programs to a halt. Advance planning for "detour" routines and rapid recovery actions are seen as being as vital to data processing installations as are the privacy and security issues which have concerned NASIS almost since its inception.

Interbranch Liaison. The ever-increasing use of information systems technology by the legislative and judicial branches of state government increases the responsibility of NASIS to assist these two branches in every way possible.

It is only through increased participation by the judiciary and the legislature that NASIS can fully meet its goal of improving the effectiveness of state government through the use of modern information systems technology.

Here again, an ad hoc committee is being used. This committee is charged with attending the various legislative conferences in order to keep such organizations as the National Conference of State Legislatures apprised of NASIS' programs and the assistance that NASIS can provide, to develop a program for the NASIS annual meeting more keenly attuned to legislative needs, and for improving the product of the NASIS annual report by having a more complete inventory of legislative applications.

Interdisciplinary Relations. NASIS continues to be a resource for assistance to the National Governors' Association, the National Conference of State Legislatures, the National Association of State Budget Officers, the National Association of State Purchasing Officials, and the Council of State Governments. These efforts fall in the area of implementation of privacy policies, criminal justice information systems, the establishment of communication networks and statutory data bases, and the interchange of information regarding existing information systems.

Only by working with the state policymakers represented by the National Governors' Association and the National Conference of State Legislatures can NASIS properly fulfill its role.

Publications. NASIS produces an annual report which itemizes the implemented applications into 26 state government program areas within the 50 states. This grouping is further broken down into 221 application areas with the type and cost of systems noted for each. This format is cross-referenced, by state, to create a matrix which permits easy indexing of application area by state (Appendix A). Broadly speaking, the survey and report are intended to assist in the management and development of information systems resources.

The quarterly NASIS *Newsletter* reporting on the activities of NASIS and the states is provided to each member and other interested individuals and organizations. Special reports and publications on such topics as information systems-related legislation, specific application areas, state activity with regard to procurement, state EDP organizations, innovative undertakings, and current federal agency topics of interest are issued.

In order to improve communication among the states, a monthly periodical takes the form of a news bulletin. The members can seek assistance or information on a systematic basis on such items as new application areas, hardware available, upcoming meetings, and other items of immediate interest. It also provides a vehicle for informing the membership of personnel changes, new standards, publications, and calls for papers.

In addition to these regular publications the work of standing and ad hoc committees results in the publication of various topical reports each year.

Meetings. One of the more effective means of communication between the member states of NASIS and the three branches within those states has been the holding of regional and annual meetings. The regional meetings provide a vehicle whereby not only the information systems administrator but also his chief subordinates have a chance to exchange ideas with their counterparts from surrounding states. They provide an opportunity for "show and tell" and for the development of mutual assistance programs. The annual meeting is an opportunity for the membership to stay abreast of the policies, both state and federal, which will impact their responsibilities in the future as well as for being made aware of the future technological state of the art in the two-to-five-year timeframe. At this meeting, concurrent sessions for representatives of each of the three branches have provided a forum which did not exist in the immediate past. It is through these concurrent sessions that clearinghouse activities have gotten under way, that divergent ideas and policies can be discussed, and that the old adage "two heads are better than one" can be given real meaning.

THE FUTURE

As has been said in prior reports, state governments have become more aggressive in carrying out their constitutional responsibilities. This has been evidenced not only by expanding state programs in areas of traditional state responsibility, but also by a more coordinated and assertive state approach to the many areas of federal-state relationships and by heavier financial and facilitative support of local government delivery systems. Repeatedly it has been determined that a major deterrent in these intergovernmental relationships and activities is the lack of information needed for planning, managing, and monitoring. Often such fundamental questions as extent and type of federal funding are simply not answerable short of a major research effort, and perhaps not then. One effort toward closing this information hiatus is the previously mentioned work undertaken to implement the intent of the Federal Program Information Act.

On a different conceptual level, there are more basic questions. The increasingly serious concern over accountability will not be side-stepped on the grounds that information gaps abound and measurement techniques are not available. Even more important, perhaps, are the many questions concerning the allocation of resources. The days of supporting each and every program for each and every perceived need are over. The call for sharp budgetary cutbacks at both the federal and state levels will demand a reevaluation of the worth of each governmental activity and in the area of information systems the value of the information provided by each application.

There is an overwhelming need to look at our repeated and continuous propensity to view each program and its financing as a discrete system. The impact of existing major program and policy decisions and the potential impact of new programs and policies on the total system must be determined far more effectively than in the past.

It is in these areas that NASIS and its constituency must concentrate their efforts. To be sure, the massive improvement in the day-to-day operation of state government that has resulted from information systems technology must be continued, expanded, and made evermore cost effective. But the overwhelming need is in assuring a sound, readily usable information base upon which management can rely in its decisionmaking. No longer is it enough to be a good data processing manager. The future demands an information resource administrator aware of the goals and objectives of his or her organization and the ability to participate in reaching those goals by providing management with the information needed, when it is needed, and in a format which lends itself to deciding between the alternatives at hand.

1. INTRODUCTION

1. INTRODUCTION

OBJECTIVES

This report contains the results of the eleventh annual survey of the states by the National Association for State Information Systems (NASIS). The objectives of the annual reports are:

- To present an annual "snapshot" of the state-of-the-art in information systems and other computerization in the states,
- To provide data for analysis of trends in state information systems, and
- Most important, to assist in increasing the exchange of information among the states on (a) information systems legislation, policies, management practices and problems, and funding; and (b) actual systems design and computer programs for use "as is" or as necessarily revised.

Separate sections on judicial and legislative applications, computer installations, communications and data entry equipment, and off-line peripherals are carried in Appendices A, B, C, and D.

In order to achieve these objectives, data has been sought through survey forms sent to all states in the years 1970 through 1980.

The necessity to limit questions to a manageable number has resulted in the exclusion of some information, particularly regarding funding. It has also resulted in changes in the form of certain questions, thus affecting comparability with prior years' figures.

DATA SURVEYED

The classes of data covered include:

1. **Coordination and control.** The extent of central coordination and control of information systems and computerization was identified, including the basis for authority and the information systems functions to which the authority applies. This information was first collected in 1971.

2. **Computer inventory.** Computer inventory was classified by size. In addition, details regarding state agency computer configurations were collected and are included in Appendix B. Information concerning state agency communications and data entry equipment is included in Appendix C, and information on off-line peripherals is included in Appendix D. Finally, data were collected about software packages used in the information systems function itself.

3. **Personnel.** Information concerning personnel costs and personnel by job categories was collected. For state agencies, these were subdivided between central information systems authority and all others.

4. **Training.** Information regarding training courses and costs was collected. In addition, details were collected regarding expected training assistance to local government by state agencies.

5. **Difficulties experienced in EDP management.** States were asked to rank order a list of problem areas largely outside of their control. In addition, states were asked to rank order a separate list of problem areas within their control. Finally, the items on each list were evaluated as to whether the problems had become more serious or less serious than they were at the time of the last survey.

6. **Formalized plans and documentation.** Information was collected concerning the existence of state information systems plans and the currency of those plans; procurement procedures; and systems, programming, and documentation standards. Much of this information was collected for the first time in 1972.

7. **Intergovernmental information systems relationships.** States were asked to indicate the nature of their general responsibility in various areas concerning information systems and computerization in local governments. States were also asked to identify any state agencies exercising control or jurisdiction over information systems or computerization development in five specific functions of local government and to specify the type of control. Finally, states were asked for details regarding any formal or informal intergovernmental organizations existing to promote intergovernmental information systems. These data were first collected in 1972. In 1973 for the first time information was obtained on specific federal-state interrelationships on information systems.

8. **Applications.** Details were collected regarding applications. The responses to this are presented in Appendix A. This information was first collected in 1971.

9. **Funding.** States were asked to provide information regarding the amount of funds budgeted for information systems and computerization. This was classified according to hardware, personnel, consultants, and other. Figures for total state budgets and amounts distributed to local governments were gathered for comparison with average EDP expenditures. Details regarding the source of funds (i.e., revolving fund or direct appropriation) and the bases for billing users for computer-related costs were also collected. The last two categories of data were collected first in 1972.

10. **Data security and privacy.** Information was sought on some of the basic problems relating to security and privacy. The security questions had to do with physical and data security procedures. Privacy questions were aimed at obtaining an overview of the status of legislation and estimates of public concern.

11. **Transfer Projects.** Specific examples of transfer of applications between states were requested and obtained and are included in the report.

As in earlier years, the scope of this survey was deliberately limited in an effort to encourage response. Responses, either complete or partial, were received from all 50 states.

It was pointed out in the earlier NASIS annual reports, and remains appropriate, that the difficulty in obtaining responses to the survey reflects to some extent inadequate "information systems" within the information systems function itself. For example, shortcomings in accounting systems, cost analysis, systems documentation, personnel records, and other management information make responding to surveys difficult in many states. Far more important, such inadequacies make it difficult to exercise adequate management control or keep the legislature and top executive branch personnel fully apprised of performance in the information systems function.

CAVEATS

The data in this report must be used with caution. Some of it is obviously unequivocal and factual (for example, the part of Table 1 which shows the basis of authority). Some data, however, may reflect definitions that are not standard (for example, the part of Table 1 which delineates the type of control).

Further, certain responses may not be totally accurate. Respondents were urged, especially in funding questions, to estimate where necessary rather than to delay responding. It has been suggested that one probable result is that the states with good systems for internal costing will show relatively higher costs for similar information systems operations than will states without a system for aggregating total costs.

2. OBSERVATIONS

2. OBSERVATIONS

This section serves as the executive summary for the findings contained in the following section on detailed responses.

1. Distributed systems and scattered small stand-alone systems can create a Tower of Babel for state information systems unless there is effective overall coordination.
2. The placement of the coordinating responsibility indicates a maturity and stability in state information systems management.
3. Leasing, as a means of acquiring large CPUs, has declined by 50 percent in five years.
4. Growth in the number of installed computers is mainly in the large and small end of the size ranges.
5. A 40 percent growth in the number of new minicomputers installed accounted for over 65 percent of the total of new computers installed.
6. The distribution of personnel among the various categories of responsibility in the data processing function remain unchanged.
7. The use of consultants continues to be an important consideration in meeting user needs.
8. The average cost of a consulting contract has risen sharply.
9. The percentage of operations and data entry employees enrolled in training programs shows a significant increase.
10. Personnel recruitment remains the data processing manager's most serious external problem.
11. Inadequate financing moves up in seriousness while lack of standards declines.
12. The internal problems remain unsolved and are no different from those in private sector installations.
13. States continue to keep statewide plans current.
14. Intergovernmental cooperative efforts continue to be at a low level unless other programmatic relationships exist.
15. Use of software packages remains high in state installations with data base management packages the most prevalent.
16. User charges continue to be the predominant method of financing state information systems activities.
17. As a percentage of total data processing costs hardware and personnel follow the national trend with the former dropping to 28 percent and the latter increasing to 47 percent of the overall expenditures.
18. Total expenditures for state information systems activities is estimated at $1.6 billion. This is an increase of approximately 12 percent compared to a national average of 15 percent.
19. Last year's anomaly which saw a significant reduction in the percentage of total state budgets spent for data processing has apparently worked itself out and this activity again accounts for .007 percent of all state expenditures.
20. NASIS prepares guidelines for drafting state computer crime legislation.
21. In terms of computer crime, breached security, and natural disaster, "IT CAN HAPPEN HERE."

3. RESPONSES

3. RESPONSES

COORDINATION AND CONTROL
(Tables 1 and 2)

The pattern of management of various factors which make up the information system function of state government shows very little change from year to year although the carrying out of these management responsibilities becomes more and more difficult.

The proliferation of installations brought about by low cost hardware, distributed systems and terminal networks demands the highest order of standards and coordination if states are to avoid a data processing Tower of Babel. Arnie Keller's statement regarding the current equipment trends is worth repeating, "unless there is centralized control over who gets the minicomputers and what they will do with them, the result most likely will be distributed confusion."

In keeping with the stability in the control and coordinating activities of state data processing, we also find a similar stability in the organizational placement of this authority. For the most part, this authority is lodged in the central finance or administrative agency of the states. Mississippi continues to be the only state in which this authority is lodged in a legislative commission.

(3) Excludes highway.
(4) Should be "C" for employment services.
(5) Excludes adjutant general.
(6) Operation control excludes higher education.
(7) Excludes Judicial Department.
(8) Excludes legislature, Univ. of Calif. Community College District, and Industrial Insurance Comp. Fund.
(9) Excludes Auditor of State.
(10) Excludes institutions of higher education.
(11) Excludes legislature.

COMPUTER INVENTORY

(Tables 3-6)

Information has again been gathered regarding computer systems configurations, data entry, and off-line peripheral equipment. Details on this equipment may be found in Appendices B, C, and D. The installations section deals only with the central processing units themselves.

The rapid growth in minicomputers which began two years ago continues apace. One state agency alone installed 20 minicomputers as communications controllers. At the same time the mainframe which has been classified as medium scale keeps showing its steady decline in numbers either being upgraded to a large size CPU for the same cost or being replaced by a more powerful small machine at a lesser cost. Indeed the lines of demarcation between the former classes of computers becomes more and more blurred.

The use of a lease or straight rental as the means of acquiring mainframes again shows a drop in all sizes of hardware. In the case of large CPUs, leasing has been reduced by 50 percent in just five years.

(a) Total does not include Guam, Ontario, or Quebec.

PERSONNEL
(Tables 7 and 8)

The most remarkable fact about the personnel findings is that they are remarkably unchanging from the previous years. The only significant variances this year appear to within the systems and programming group. While this group as a whole continued its relative proportion of the total staff the applications programmers within the groups showed a 2 percent increase at the expense of systems analysts. This change was the same for both the central authority agencies and all other agencies of state government.

As in previous years, the following chart has been prepared to indicate the average salaries for each major category of state data processing employees. A word of caution is required regarding this chart. It is subject to such vagaries as geographical location, turnover rates which would keep the average near the low-end entry levels, and even changes in staffing patterns.

	*Average salary**	
Category	*High*	*Low*
Management		
Third Level	$52,000	$28,670
Second Level	42,000	24,526
First Level	37,000	17,766
Systems analysts	33,212	16,673
Systems programmers	33,070	16,000
Application programmers	25,324	11,200
Computer operators	16,944	7,220
Data entry	13,246	8,309

*Central information systems authority only.

Table 7

CONSULTANTS
(Table 9)

The use of consultants continues to play an important part in the information systems manager's overall plan for meeting his users' needs. While it is again impossible to draw any hard conclusions because variances in the reporting state it does appear that the average cost of a consulting engagement is rising rapidly. With the recruiting of qualified people the manager's worst external problem and in their opinion getting worse by a ratio of 2.5 to 1, it would seem that the consultant will continue this part for the forseeable future.

Table 9
CONSULTANT EXPENDITURES
1980-1981
(19 states reporting)

	Number of projects		*Cost (in thousands)*	
Function	*1980 (Actual)*	*1981 (Est.)*	*1980 (Actual)*	*1981 (Est.)*

Not categorized	21	14	2.777	1.555
Total	133	118	$25.388	$16.476

TRAINING
(Tables 10-12)

The sharp increase in the percentage of data entry and operations employees involved in training programs is the most striking finding in this section of the report. It is assumed that this was in fact brought on by increases in installed CPUs shown in Tables 3 and 6 and also by installation of state of the art data preparation equipment. These increases were offset by decreases in the percentage of programmer and analysts trainees.

Formal in-house training programs continue to be far-and-away the most popular method of training with vendor schools being a distant second.

COST OF TRAINING
1980-1981
(32 states reporting)

Areas of expenditures	*1980 (Actual)*	*1981 (Estimated)*
Cost of trainers	$ 752,824	$ 936,332
Tuition	1,553,177	1,735,626
Trainee costs	2,142,107	2,368,698
Total	$4,448,108	$5,040,656

RANKING OF DIFFICULTIES
(Tables 13 and 14)

The data contained in these tables is intended to portray, in order of seriousness, the factors that deter efforts to achieve the most effective use of the states' information systems resources. Table 13 reviews those conditions which are external to the information systems manager and over which he has little control. Table 14 depicts those internal problems for which the manager has responsibility and therefore must work to resolve. Both tables also indicate whether or not the problem is becoming worse.

External Problems

For the third straight year the problems of getting trained personnel is the information systems manager's worst external headache. Well over half the 41 states reporting indicate that the problem is becoming more serious. Management understanding and commitment and lack of a definitive plan were the next most serious problems. Two other problem areas almost swapped places with inadequate financing moving up from tenth to fifth place and lack of standards dropping from sixth to tenth place in the order of seriousness.

Internal Problems

High costs, missed programming schedules and programming backlogs continue to plague the manager. Although it may be of small solace the January 19, 1981 issue of *COMPUTERWORLD* carried a statement by Thomas Nies, President of Cincom Systems, Inc., the heading on the story was "backlogs found plaguing 90 percent of installations".

FORMALIZED STATE PLANS AND STANDARDS
(Table 15)

Twelve states updated their statewide plans and one state established such a plan for the first time. Of the eight states which eliminated their plans over half the plans were five years old or older. Of the remaining state plans only 10 percent are four years old or older.

INTERGOVERNMENTAL RELATIONSHIPS
(Tables 16-18)

State-Local

Previous NASIS reports have speculated on the role that states would play in promoting and assisting the development of information systems at the local levels of government. These reports stated that the states would play an increasing role in this type of intergovernmental relationship. One of the goals of this activity was thought to be the development of cooperative arrangements whereby one would find joint systems development efforts and joint use of computer facilities. To date, if the realities of "political considerations" have not obviated such possibilities, they have at least slowed them down.

While there has been an increasing number of states involved in state-local liaison, almost all such activities are in an advisory capacity only. Table 16 depicts the areas of authority and the types of relationships which exist in the states which reported some type of formal relationship with local governments.

Table 17 again outlines those areas of state-local relationships where control is brought about through the overall programmatic relationships rather than those which deal only with the information processing function. Here again there is not a great deal of change from year to year.

State-Federal

The area of health and welfare is again the predominant recipient of federal assistance followed by labor and environmental protection. Again the variations in the states reporting make absolute comparisons impossible, but it does not appear that there has been any reduction in federally assisted development projects.

MANAGEMENT OF THE INFORMATION SYSTEMS FUNCTION
(Tables 19 and 20)

States continue to make extensive use of managerial software packages with over 75 percent of the reporting states indicating use of some packages and 95 percent using data base managers.

Table 20 is provided to depict the various reports in use for internal management purposes. There is no way the effectiveness of these reports can be measured.

FUNDING AND EXPENDITURES
(Tables 21-23)

Because the data contained in this section must be dealt with very carefully due to variables in governmental structure and organization, policies, and statutory requirements, we believe that we must again warn the reader that while the funding and expenditures tell us a great deal about states' information systems activities, we do not feel that this type of information should be reported on an individual state basis. Some states are unable to provide complete financial data and, in any event, the lack of absolute comparability of data between states makes this decision unavoidable. For this report, 50 states provided information on the method of funding, 50 states provided information on the method of billing users for computer hardware costs, but only 39 states were able to provide complete data on all EDP expenditures.

Method of Funding

The roughly 60-40 division in the sources of funding for information systems, which has been commented on in previous reports, continues in the 1980-81 period. For the first time in the preparation of this report no major shifts in the method of financing this activity have been reported. The largest shift reported accounted for only seven percent of that state's total funding program.

As an overall statistic, averages of the two funding sources reported by the states over the last nine years are shown below.

Year	*Number of states*	*Revolving fund, etc.*	*Direct appropriation*
1972	39	49%	51%
1973	46	64%	36%
1974	45	61%	39%
1975	48	61%	39%
1976	50	56%	44%
1977	50	59%	41%
1978	50	57%	43%
1979	50	62%	38%
1980	50	62%	38%

Expenditures

On the same basis as used in prior reports expenditures for 1980 were estimated to be approximately $1.6 billion dollars. This amounts to a 12 percent increase over the previous year. This compares quite well with an overall International Data Corp. survey contained in *COMPUTERWORLD* of July 1980. In that survey IDC reported user estimated increased of 15 percent. That same survey reported that hardware made up 27.4 percent and personnel 46.4 percent of the overall budgets, this is almost the same split as 47 percent and 28 percent amounts shown on Table 23.

The apparent anomaly which was noted in last year's report regarding the ratio of data processing expenditures to total state expenditures has abated, with information systems again accounting for 7/10 of 1 percent of total state expenditures. On an individual state basis the extremes for this figure ranged from a high of 1.4 percent to a low of 0.2 percent. This remains the same as last year.

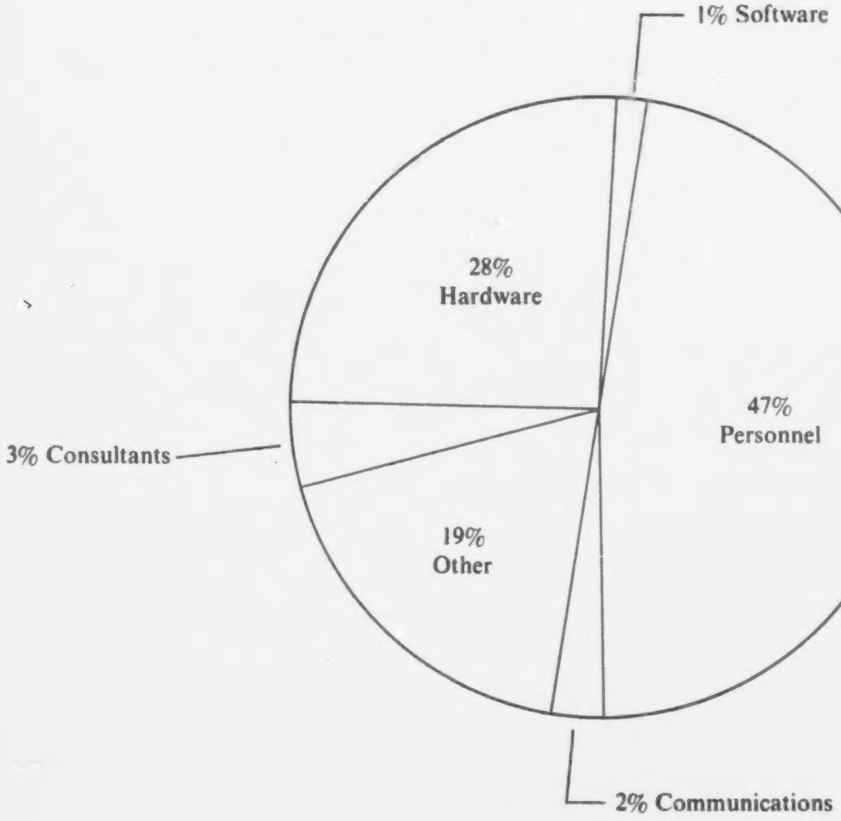
WHAT MAKES UP THE STATE EDP BUDGET



SECURITY AND PRIVACY
(Table 24)

It can happen here! What more can be said. The accompanying table indicates only too well the extent to which we are leaving ourselves open to future woes. Although NASIS found it worthwhile to have one of its standing committees develop guidelines for drafting computer crime legislation and prepare a sample draft bill which has been included in the Council of State Governments' 1981 publication, *Suggested State Legislation* (Volume number 40) many of its members cannot find the backing and the resources to develop a comprehensive security program. We must again cite the 1973 annual report which said "we are courting potential catastrophies of great dimension."

TRANSFER PROJECTS
(Table 25)

With an increase again being shown in the number of states reporting some type of transfer activity, we believe that there is continuing evidence of the mutual support and assistance which NASIS members render one another in reducing the cost of implementing new applications. Table 25 speaks for itself in depicting the variety and number of systems which have been transferred at various levels among the states. It does not seem that any more could be said than has been said in the past four reports, "that the savings that occur through transfer consist of both time and money—oftentimes substantial amounts."

APPENDIX A

APPLICATION INVENTORY AND DESCRIPTION

The matrix at the beginning of this Appendix indicates the program areas in which the states have automated systems. For more detail as to the nature of specific systems, please refer to the application inventory of the individual states.

Application	Alabama	Alaska	Arizona	Arkansas	California	Colorado	Connecticut	Delaware	Florida	Georgia	Hawaii	Idaho	Illinois	Indiana	Iowa	Kansas	Kentucky	Louisiana	Maine	Maryland	Massachusetts	Michigan	Minnesota	Mississippi	Missouri	Montana

Inmate Information System — Correctional Services
Inspection Scheduling System — Agriculture and Markets
Inspector Activity Reporting System — Agriculture and Markets
Insurance Statistics — OGS
Integrated Accounting — Transportation
Interim Medical Assistance Reporting System — Social Services
International Math and Statistics Library Programs (IMSL) SUNYA
Inventory — Thruway
Inventory of Computers, Statewide — Budget
Inventory of EDP Personnel, Statewide — Budget
Inventory of Tabulating, Teleprocessing and Data Conversion Equipment, Statewide — Budget
Inventory System — Audit and Control
Investment System — Teachers' Retirement
Investments — Audit and Control
Item and Test Analysis — Education

Job Accounting System, PACES — DACC
Job Matching and Placement — Labor

Kidney Disease Institute Recipient/Donor Program — Health

Laboratory Information Management System — Health
Land Use and Natural Resources Inventories System (LUNR) — Office of Planning Services
Land Use Inventory, State Parks — Parks and Recreation
Land Use Inventory and Land Use Modeling — Tri-State Regional Planning Comm.
Legislative Bill Retrieval System — Senate and Assembly
Library Circulation Control — SUNY Central
Library Systems (5) — Education
Licensing Bureau System — Insurance
Licensing of Trades — State
Licensing System — Agriculture and Markets
Life Insurance — Civil Service
Loans — Teachers' Retirement

Mailing List System — Environmental Conservation, Audit and Control, Agriculture and Markets, OCA
Management Information System — H&MH Fac.
Manpower Information Resources System — DACC
Mapping Systems, Grid Coordinate — Tri-State Regional Planning Comm.
Mass Appraisal Development — Equalization and Assessment
Master Business Records File — Commerce

Master Lists, etc. — Agriculture and Markets
Medicaid Statistics, 1% Statewide Sample — Social Services
Medicare Part B Insurance Premium Claim System — Social Services
Member Information System — Teachers' Retirement
Member Time and Activity Reporting — State Police
Mental Hygiene Family Care — Social Services
Minor Civil Division Information System (MCD) — Office of Planning Services
Minor Rehabilitation and Repair Information System — SUCF
Mortality Studies — Public Service
Mortgage Application — Teachers' Retirement
Mortgager, Accounting and Control — Teachers' Retirement
Municipal Affairs — Audit and Control

Name, Searching, Automated — DCJS
National Drug Code Directory — Social Services
Natural Gas Utilization Survey — Public Service Commission
Non-Compensated Cases Closed Reporting — Workmen's Compensation Board
Non-Public School Data System — Education

Office Equipment Inventory System — SUCF
Oil, Gas and Water Well Study — Education
On-Line Data Entry System — DCJS
Operating Budget Control — SUCF
Outdoor Recreation Facilities Inventory — Parks and Recreation

Paces Report — Public Service Commission
Parking Listings — OGS
Patient Accounting Systems (2) — DACC
Patient Information — Mental Hygiene; DACC; Correctional Services
Payroll — Audit and Control; Labor, Thruway, HMHFIC; Research Foundation
Payroll Roster — Environmental Conservation
Personal Service, Mental Hygiene Institutions — Budget
Personal Service, Schedule B — Budget
Personnel — National Guard; Military & Naval Affairs; Research Foundations; Labor, State Police; Health; Social Services; Transportation; Agriculture and Markets, DACC; SUNY Central
Personnel Administration — COBOL/DMS-1100 — SUNY B
Personnel Attendance System — Education
Personnel Eligibility Lists — Audit and Control
Personnel Information and Payroll System — Teachers' Retirement
Personnel Roster and Vacancy Report — Social Services; Labor; Audit and Control; EDUC; DACC
Personnel Staffing Status System — Mental Hygiene
Pesticides Reporting — Environmental Conservation
Pharmacy Dispensing System — DACC
Power Complaints — Public Service Commission
Power Consumption and Cost Analysis Study — Public Service Commission
Power Rate Structure Validity Study — Public Service Commission
Prices, Compliance With Law Pertaining to Increase and Decrease In — State Liquor Authority (ABC)
Professional Licensing — Education
PROMIS (Personnel Resources On-Line Management Information System) — Motor Vehicles
Property Records — Public Service Commission
Public Communication Summary — Assembly
Pupil Evaluation Program — Education
Purchase of Services Cost Allocation — Social Services

Quality Control — Social Services

Railroad Ceiling and Special Franchise Computation — Equalization & Assessment
Rapid Inquiry and Data Entry via Visual Display — Motor Vehicles
Real Property Information System — Equalization and Assessment
Real Property Inventory — State University Construction Fund
Records Management — OGS
Regents Scholarship Administration — Education
Regents Scholarship Examination Processing — Education
Registry of the Blind — Social Services
Reimbursement Billing — Mental Hygiene; DACC
Reproduction Services — OGS
Research and Development — Environmental Conservation
Retirement Accounts — Audit and Control
Retirement Application Processor — Teachers' Retirement
Road Engineering, Computer Assisted Design for (CADRE) — Transportation

Safety Officers Reporting System — Mental Hygiene
Sales Tax Return Processing — Taxation and Finance
Sample Reporting System — Agriculture and Markets
Senate Journal System — Senate
Social Security Payment Information System — Social Services
Social Services Information System — Social Services
Solid Wastes — Environmental Conservation
Space-System for Planning and Constructing the Environment —SUCF
Special Sporting Licensing — Environmental Conservation
Sponsored Funds Administration System — Research Foundation/SUNY
Sporting Licensing Analysis — Environmental Conservation
State and Federal Aid — Education
State Data Exchange — AABD — Social Services
State Pollution Discharge Elimination System — Environmental Conservation
Statistical Analysis of Data — Transportation
Statistical Analysis of Data for Empirical Research — Youth
Statistical Programs for the Social Services (SPSS), written in FORTRAN — SUNYA; EDUC
Statistical Survey — Agriculture and Markets
Statistical System (various) — Office of Court Administration
Statistical Systems for Tax Processing and Accounting Systems — Taxation & Finance
Status Reporting — HMHFIC
Stock and Furniture Inventory — Transportation
Student Administration and Registration System — COBOL, SUNY/B
Student Loans Accounting — SUNY Central
Study of Air Pollution of Power Impacts — Public Service Commission
Summary Case History — DCJS
Supplemental Benefits Reimbursement System — Workmen's Compensation Board
Supply Support System — Mental Hygiene
Surplus Food Distribution and Billing System — OGS
Surplus Real Property — OGS
Surveys, Miscellaneous — Education

Tax Accounts Receivable System — Taxation and Finance
Telephone Complaints — Public Service Commission
Telephone Quality of Service — Public Service
Telephone Rate Cost Component Analysis — Public Service Commission
Telephone Service — Public Service Commission

Telephone Service Rating — Public Service Commission
Telephone Survey System — Public Service Commission
Time Accrual System — Agriculture and Markets
Time and Activity System — Environmental Conservation
Time Distribution System, Billing for Federal Chargeback — Law
Toll Transaction and Revenue Auditing, and Commercial Charge Account Billing — Thruway
TOPICS — Transportation
Traffic Estimation System, Director — Tri-State Regional Planning Comm.
Traffic Summons Accounting — State Police
Traffic Volume Assignment — Transportation
Travel Surveys (Home Interview and Truck-Taxi) — Tri-State Regional Planning Comm.
Truck Tax Permits and Plates Registration System — Taxation and Finance

Unemployment Insurance, Payments and Tax Accounting — Labor
Urinalysis Reporting System, Automated — DACC
Utility Data Bank — Public Service Commission

Valuation System — Teachers' Retirement
Vehicle Registration — Motor Vehicles
Vital Information Record System, Automated (AVIRS) — Health
Vocational Rehabilitation — Education
Voting Summary — Senate

Walk-in Examination System — Insurance
Wanted Persons Module — DCJS
Water Company File — Public Service
Water Pollution Reports — Programs — Environmental Conservation
Water Pollution Monitor System — Environmental Conservation
Water Resources — Environmental Conservation
Weather Normalization Studies — Public Service Commission
Welfare Recipients, Maintenance of Statistics on — Social Services
Wildlife Survey — Environmental Conservation
Work Incentive Program, Maintenance of Status of People in (WIN) — Social Services
Work Performance Analysis on Local District Personnel, Preparation — Social Services
Workmen's Compensation Claims Recording — State Insurance Fund
Workmen's Compensation Insurance, Accounts Receivable, etc., for — State Insurance Fund
